TASK 2: BUILD YOUR STUDENT DIGITAL PORTFOLIO

I developed my student digital portfolio by creating profiles on GitHub, LinkedIn, and Kaggle, as these platforms are essential for building a strong professional presence in the digital world. GitHub is primarily used to showcase coding projects and track my progress as a learner. I created a profile README that includes my name, academic background, branch, and a brief statement about my learning goals. LinkedIn acts as a professional networking platform where I added my education details, which helps me connect with peers, mentors, and potential recruiters. Kaggle is a platform focused on data science and analytics, where I can explore datasets, participate in competitions, and enhance my problem-solving skills.

Each platform serves a unique purpose and contributes to my overall development. Over the next four years, I plan to regularly upload projects on GitHub to build a strong portfolio, actively use LinkedIn to grow my professional network and stay updated with industry trends, and engage with Kaggle to improve my analytical thinking and practical knowledge.

This task helped me understand the importance of creating and maintaining a professional digital identity. It also gave me insight into how these platforms can support my academic journey and future career opportunities, making me more prepared for the competitive digital world.
