TASK 3: Explore Coding & Collaboration Platforms:: Google Workspace Collaboration (mandatory)

For my project, I used Google Forms to create and publish an interactive questionnaire. The form was designed to collect responses efficiently on a specific topic, using a combination of multiple-choice, checkbox, and short-answer questions. I ensured that the questions were clear, relevant, and arranged in a logical sequence to make the form easy to understand and user-friendly. I also used features like required responses, sections, and automatic response collection, which helped in maintaining accuracy and organization of data.

Through this activity, I practiced important skills such as digital survey creation, data handling, and basic research techniques. I learned how to design effective questions, avoid ambiguity, and gather meaningful information from respondents. Additionally, I understood how responses are automatically stored and can be converted into graphs and summaries for easier interpretation.

These tools will be very helpful in my academic journey, especially for projects, case studies, and research-based assignments. Using platforms like Google Forms will enable me to conduct surveys, analyze data quickly, and present results in a clear and professional manner, thereby improving both efficiency and the overall quality of my academic work.
